CO2-AT2 Assignment

QUESTIONS

Q1
Restaurant Digital Order Analyzer
10 marks

Q2
Grocery Shopping Cart Management System
10 marks

Q3
Web Browser Back Navigation
10 marks

3/3 answered

Q1 Restaurant Digital Order Analyzer

10 marks

A restaurant stores orders as DOSA-3-IDLY-2-VADA-1. Create a program that:

- Splits the order using split()
- Converts food names to uppercase using toUpperCase()
- Counts the number of ordered items using length()

Your Code

```
1 public class Q1 {
2     public static void main(String[] args) {
3         String s = "DOSA-3-IDLY-2-VADA-1";
4         String[] a = s.split("-");
5         for (int i = 0; i < a.length; i += 2)
6             System.out.println(a[i].toUpperCase() + " : " + a[i + 1]);
7         System.out.println("Items = " + a.length / 2);
8     }
9 }
```

Input

stdin input

Output

```
DOSA : 3
IDLY : 2
VADA : 1
Items = 3
```

3/3 answered

Q2 Grocery Shopping Cart Management System

10 marks

Add products using add()
Remove purchased products using remove()
Check whether a product exists using contains() Check how many products there in the list

Your Code

```
1 import java.util.ArrayList;
2 public class Cart {
3     public static void main(String[] args) {
4         ArrayList<String> cart = new ArrayList<>();
5         cart.add("Rice");
6         cart.add("Milk");
7         cart.add("Sugar");
8         System.out.println("Products in Cart:");
9         for (String p : cart)
10            System.out.println(p);
11         System.out.println("\nIs Rice Available? " + cart.contains("Rice"));
12         System.out.println("Number of Products in Cart = " + cart.size());
13     }
14 }
```

Input

stdin input

Output

```
Rice
Milk
Sugar
Is Rice Available? true
Number of Products in Cart = 3
```

Q2 Grocery Shopping Cart Management System
10 marks

Q3 Web Browser Back Navigation
10 marks

3/3 answered

Q3 Web Browser Back Navigation

10 marks

A web browser stores recently visited pages so that users can navigate backward.

Requirements:

Add visited page URLs using push()
Perform the Back operation using pop()
Display the current page using peek()

Your Code

```
1 import java.util.Stack;
2 public class Q3 {
3     public static void main(String[] args) {
4         Stack<String> pages = new Stack<>();
5         pages.push("Google");
6         pages.push("YouTube");
7         pages.push("ChatGPT");
8
9         System.out.println("Visited Pages:");
10        System.out.println("Google");
11        System.out.println("YouTube");
12        System.out.println("ChatGPT");
13    }
```

Input

stdin input

Output

```
Visited Pages:
Google
YouTube
ChatGPT
Back Operation:
```
